DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 5-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuznicki et al (US 4,972,439).

Claims 5,7,9.

Kuznicki et al discloses a communication system and method, comprising a transmission apparatus (22) for transmitting a signal at plural types of transmission rates (see col.2, lines 55-56), and a reception apparatus (26) for receiving the transmitted signal, wherein:

the transmission apparatus comprises:

signal generation means (20) for generating a signal to be transmitted into which pilot symbols (Sync 1 and Sync 2) which are predetermined patterns have been inserted, such that a ratio of a number of the pilot symbols to a total number of symbols in a single slot of the signal becomes a value responsive to a transmission rate of the signal (see Fig.2A and col.3, line 66 ~ col.4, line 2) ; and

transmission means (see Fig.3) for transmitting the generated signal, and

the reception apparatus comprises:

reception means for receiving the transmitted signal; and

coherent detection means for carrying out coherent detection by using the pilot symbols included

Art Unit: 2611

in the received signal. Though not described, a coherent detection means is required at a receiver side that uses the pilot symbols.

Claims 6,8 and 10.

Col.3, line 66 ~ col.4, line 2 of Kuznicki et al teaches that the ratio of the number of the pilot symbols to the total number of symbols in the single slot of the signal becomes a substantially optimum value in consideration of both accuracy of coherent detection by using the pilot symbols and transmission efficiency of the signal, since an appropriate number of synch bits or pilot symbols are selected for a given transmission rate.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
